AREAS OF EXPERTISE

Programming Languages: Python, C++, C, Java, JavaScript.

Systems & OS: Linux (xv6 kernel development), Multitasking OS concepts, Embedded Systems.

AI & Applied Technologies: AI-assisted development (Claude Code, Cursor), Test Automation, Data & Log Analysis, Root Cause Analysis.

DevOps & Tools: Git, GitHub, CI/CD pipelines, REST APIs, JetBrains IDEs, VS Code.

Networking & Security: OSI Model, TCP/IP, Encryption systems, JWT Authentication, Monitoring Dashboards.

PROFILE

Computer Science student at Bar-Ilan University combining low-level systems knowledge with hands-on production experience.
Currently troubleshooting live telecom infrastructure as a NOC analyst.
Strong academic foundations in Operating Systems, Data Structures & Algorithms, Computer Networks, and Object-Oriented Programming.
Project experience includes kernel-level development (xv6 process scheduler), a secure full-stack application (JWT auth, 15+ REST APIs, MongoDB.
Experienced with AI-assisted development workflows for architecture, test automation, and data analysis.

PROJECTS

Operating Systems: Priority Scheduler (xv6)

- Modified the xv6 kernel to implement a priority-based process scheduler.
- Handled Process Control Block (PCB) modifications and system-level debugging.
- Executed complex OS-level debugging to optimize resource management, MMU, and system calls.

Full-Stack Security Application

- Built a secure web/mobile application featuring robust authentication flows using JWT and email verification.
- Designed and managed 15+ REST API endpoints and optimized MongoDB schema collections for scalable data persistence.
- Utilized Claude Code to architect, automate test workflows, and perform data analysis for system optimization.
- Implemented secure communication protocols, ensuring data integrity and protection against common vulnerabilities.

Enhanced Arkanoid Game (Java)

- Architected and refactored core game components using Advanced OOP Design Patterns to ensure modularity and code reusability.
- Optimized physics engines and collision detection algorithms, significantly improving frame rate stability and performance.
- Managed the full software development lifecycle, from algorithmic design to final deployment for active users.

EXPERIENCE

NOC Analyst | WeCom

2026 – Present

- Monitor network performance and system availability using professional dashboards.
- Troubleshoot real-time connectivity and infrastructure issues in a telecommunications environment.
- Apply debugging methodologies and failure pattern recognition to identify and resolve network issues across telecom infrastructure.

EDUCATION

Bar-Ilan University, Bachelor of Science, Computer Science

2023 — Present (2027)

MILITARY SERVICE

Sergeant on the C4I department of the Artillery Corps

2017 — 2020

Managed embedded computing, electronics, and encrypted wireless communication systems in mission-critical, real-time military environments.
