AREAS OF EXPERTISE

Programming Languages:
Python, C++, C, Java, JavaScript.

Software & Web:
React, Node.js/Express, REST APIs, MongoDB, JWT, OOP.

Development & Testing:
Data Structures & Algorithms, Git, Docker, CMake, GoogleTest, unit testing.

AI & ML Foundations:
Machine Learning coursework, neural network fundamentals, Claude Code, AI-assisted dev.

Systems & Networking:
Linux, TCP/IP, Grafana, Zabbix, monitoring, incident triage, production troubleshooting.

PROFILE

Computer Science student at Bar-Ilan University with experience building full-stack applications and Java projects, alongside monitoring live telecom production systems. Skilled in Python, C++, Java, and JavaScript, with strong foundations in Data Structures & Algorithms, OOP, Operating Systems, networking, and Machine Learning fundamentals. Built REST APIs, authentication flows, and a C++ Bloom Filter component; familiar with Git, Docker, testing, debugging, and practical technical problem-solving.

PROJECTS

Gmail-Like Full-Stack Web & Mobile Application

- Built the front end with React and JavaScript and the backend with Node.js/Express, using MongoDB for persistence.
- Designed and implemented 15+ REST API endpoints for users, mails, labels, and authentication.
- Implemented two-step authentication using JWT and email verification.
- Implemented blacklist and Bloom Filter logic for URL validation, using multiple hash functions for space-efficient probabilistic membership checks.
- Used Claude Code for AI-assisted development, debugging, testing, and analysis.

Enhanced Arkanoid Game (Java)

- Built and refactored the game in Java using OOP principles and reusable design patterns.
- Implemented collision detection, game logic, levels, sprites, and event-driven interactions.
- Improved modularity and runtime stability by separating game entities and responsibilities.

EXPERIENCE

NOC Analyst | WeCom

2026 - Present

- Monitor network performance and system availability using Grafana and Zabbix.
- Triage real-time alerts, connectivity failures, and infrastructure issues in a live telecommunications production environment.
- Apply structured debugging and failure-pattern analysis to identify root causes, resolve incidents, and escalate issues while maintaining service reliability.

EDUCATION

Bar-Ilan University, Bachelor of Science, Computer Science

2023 - Present | Expected graduation: 2027

MILITARY SERVICE

Sergeant on the C4I department of the Artillery Corps

2017 - 2020

Managed embedded computing, electronics, and encrypted wireless communication systems in mission-critical, real-time military environments.
