Portfolio

SKILLS

Languages

JavaScript · C++ · Java · Python · C

Web & Mobile

React · Node.js / Express · REST APIs · MongoDB · JWT · Android (Java)

Tools & Testing

Git · Docker / Docker Compose · CMake · GoogleTest · Unit testing

Systems & Networking

Linux · TCP/IP · Sockets · Multithreading · Grafana · Zabbix · Incident triage

CS Foundations

Data Structures & Algorithms · OOP & Design Patterns · Operating Systems · Machine Learning

LANGUAGES

Hebrew - Native

English - Fluent

PROFILE SUMMARY

Computer Science student at Bar-Ilan University who built a full-stack email platform end to end: a Node.js REST API, React and Android clients, and a multithreaded C++ server. Currently a NOC Analyst at WeCom, bringing real production and debugging experience. Looking for a student software developer position, with flexible availability.

WORK EXPERIENCE

2026 - Present

WECOM

NOC Analyst

- Monitor network performance and system availability with Grafana and Zabbix in a live telecom production environment.
- Triage real-time alerts, connectivity failures and infrastructure issues; identify root causes and escalate to engineering teams.

PROJECTS

GMAIL-LIKE EMAIL PLATFORM

React · Android (Java) · Node.js/Express · MongoDB · C++ · Docker

- Built a Node.js/Express REST API with 18 endpoints for users, mails, labels, drafts, search and a URL blacklist, with two-step login and JWT authentication.
- Developed a React web client and a native Android client against the same API.
- Wrote a multithreaded C++ TCP server that checks every URL in outgoing mail using a Bloom filter with multiple hash functions; marking a mail as spam blacklists its URLs.
- Structured the C++ server with factory and command patterns and covered it with 24 GoogleTest unit tests built with CMake.
- Containerized the API, web client, C++ server and MongoDB with Docker Compose.

ARKANOID GAME

Java · OOP · Design Patterns

- Built a brick-breaker game with a 60 FPS game loop, multiple balls and a paddle with 5 hit regions that control the bounce angle.
- Implemented continuous collision detection, treating each frame's movement as a line segment so fast balls never pass through blocks.
- Used the Observer pattern for game rules (block removal, ball loss, scoring); the game loop depends only on Sprite and Collidable interfaces.

EDUCATION

2023 - 2027 (Expected)

BAR-ILAN UNIVERSITY

B.Sc. Computer Science

Relevant coursework: Advanced Systems Programming · Operating Systems · Database Systems · Data Structures · Algorithms · Computer Architecture · Programming Languages · Machine Learning

MILITARY SERVICE

2017 - 2020

ARTILLERY CORPS - BRIGADE C4I DEPARTMENT

Sergeant, Communications Security & Encryption Team Lead

- Led a team of soldiers in the brigade's communications security section, responsible for the brigade's encrypted communication equipment.
- Mapped and encrypted the brigade's communication devices, and configured military Motorola radios by loading SIM and crypto keys.
